

What the microenvironment does to every arm, by cell state

glycolytic state

persister state

NOT a ranking. Signed deliberately: red is a loss, blue a GAIN, and the gains are real - clonal heterogeneity supplies a low-defence tail that dies while the average cell resists. A blank cell is an axis that cannot act on that arm, which is a property of the run rather than of the biology. Every arm but radiation's DNA channel is parameterised with placeholders.
