

Evidence Depth Along the SDT → Ferroptosis → ICD Chain
(Number of SDT articles engaging each step)

Each bar = number of SDT articles whose title and first 4,000 body characters -- the abstract, and the start of any full text held -- match that step. The chain is not monotone: it dips at GPX4 inactivation (3), STING activation (4), and ends at 27 at ICD. Matching a step is not evidence that the article demonstrates it, and the steps are matched by different rules; co-mention is not the link.
