

Evidence Depth Along the SDT → Ferroptosis → ICD Chain
(Number of SDT articles engaging each step)

Each bar = number of SDT articles engaging this step. The chain is not monotone: it dips at GPX4 inactivation (3), STING activation (4), and ends at 27 at ICD. Bars are not equally strict: ROS generation and GSH depletion require the process to be described, the rest require the molecule to be named. Co-mention is not evidence of the link.
